TRANSITIONAL DSP PRODUCT PROCUREMENT SCHEDULE (Residential and Small Commercial and Industrial Customer Classes)

- Note:**
- 1) This exhibit does not show DSP steady-state supply products which complete the supply portfolio in those time periods where no supply product is shown.
 - 2) "P" indicates approximate time at which a quarterly procurement is undertaken.
 - 3) Procurements will be carried out by customer class, however the mixture of full requirements, load following products and spot market purchases is the same.
 - 4) The addition of various product purchases totals 100% and equals total default service load (including where the steady-state supply products are not shown).
