

Third Party Supplement Addendum

Will you own and operate your renewable energy installation? If you have not yet decided, refer to our Third Party FAQs. If you decide upon a Third Party installation, you must complete this Third Party Supplement Addendum.

In accordance with the Pennsylvania Public Utility Commission (PaPUC) Final Order on March 29, 2012, customer-generators may contract with Third-parties to perform the operational functions of the alternative energy system. Under this arrangement, the system is only eligible for net metering if it is designed to generate no more than 110% of the customer-generator's historic annual electric consumption. This consumption is the customer-generator's total electric usage in the twelve full months immediately preceding the customer-generator's submission of the interconnection application. Note that the PaPUC categorized the 110% consumption limit as a "design parameter" that must be complied with during the design phase. A system that is owned *and* operated by a customer-generator itself, and not a third-party, is not subject to the 110% consumption limit at this time.

Other conditions may apply to your installation.

- Electric services with less than one year of consumption data - The PaPUC requires that when a customer-generator and developer seek to develop an alternative energy system in connection with a new building, the customer-generator and/or developer must provide an estimate of annual electric consumption for the new building and demonstrate that the system design does not exceed 110% of the annual estimated consumption. The customer-generator and/or developer must provide adequate support for the estimated consumption with the interconnection application, which may include one or more years of historical usage or estimates based on similarly equipped and utilized buildings.
- The PaPUC noted that the 110% consumption limitation also applies to interconnection applications seeking to expand an existing alternative energy system.
- Finally, the PaPUC clarifies that, with respect to virtual meter aggregation, the 110% consumption limitation applies to the cumulative consumption of all meters that qualify for virtual meter aggregation.

If any of these conditions applies to your installation, complete the following Third Party information. If you have questions, refer to our Q&A or contact PPL at the following email addresses:

Systems 25 kW or smaller and being installed at a location with single-phase service:

renewableenergyapplications@pplweb.com

Systems larger than 25 kW (including single phase service locations) and systems of any size being installed at a location with three-phase service: businessaccounts@pplweb.com

Third Party Information

Name of Third Party: _____

Mailing Address: _____

City: _____ State: _____ Zip Code: _____

Telephone (Daytime): _____ (Evening): _____

Facsimile Number: _____ E-Mail Address: _____

Actual Historic 12-month Consumption (kWh) (Previous 12 months): _____

Estimated 12-month Consumption (kWh) (Provide documentation): _____

Building (Square Feet): _____ HVAC Source: _____ Water Heat Source: _____

The Generator Disconnect Switch is within Line of Site of the PPL Meter? Yes/No (Circle Response)

I hereby certify that to the best of my knowledge, all of the information provided in this Third Party Supplement is accurate.

Legal Name of Third Party: _____

Third Party Signature: _____ Date: _____

Printed Name: _____ Title: _____
