

ATTENTION!

As of May 1, 2006, PPL Electric Utilities will require outdoor cabinet-mounted metering for all new installations involving overhead secondary services with current transformer (CT) metering. This is a change from outdoor rack-mounted metering to outdoor cabinet-mounted metering.

From this point forward, rack-mounted metering will be allowed only for temporary services and by approval of the Supervisor of Metering Services.

Sketches for outdoor cabinet-mounted metering can be found on the Rules for Electric Meter and Service Installation (REMSI) Web site under the Master Sketch Table at <http://www.pplelectric.com/business/tariff+and+rules/remsi/table+of+contents.htm>.
